Parameter of Electricity

Power supply	Water Engine	heating	Engine capability	
voltage	frequency	Power	current	Power
AC220-240	50/60Hz	750W	3A-4A	1500W

Safety engine work efficiently, slight noise

Drawing of Mixer Connection

Fixing Steps

1. Choose position for installing

Organize the drainer system Plug for power supply pipe for water enter. Then place bathtub on the spot. Adjust the feet to make the tub flat.

2. Connect the drainer system

The flexible pipe of drainer located under the bathtub. Please fix this pipe in the cloaca and seal it, please do not fold the pipe to stop the water out, as Image 2.1

3. Connect water pipe

Water pipe is able to bear high pressure. Please connect this pipe follow the instruction, it will be better to place a valve between the water supply and each pipe

4. Connect power supply

50/60Hz 220V-230V are suit for this bathtub. Please organize the plug as showing image 2.2 and make it waterproof. Please test it workable.

Note: double color (yellow and green) wire lead to the earth from the engine, one end connect the iron(or steal) structure, the other end lead to the earth.

Ordinary Faulty instruction

Normal faulty	Reason of faulty	Remove way
	Switch cut off ,power supply not connecting	Check the power supply connection
Fail to turn on/off	Cable box do not connect with the key of turn on/off	Check and connect it
	Fuse of cable burn out	Replace by new one
Display function	Cable box do not connect with the key of turn on/off	Check and connect it
	Display stop working	Replace by new one
Lamp fail	Cable box do not connect with the key of turn on/off	Check and connect it
	Faulty of Lamp overload	Replace the new lamp
Out of control	Break between the cable box and display	Check connection of the cable box and display then return on
Engine stop working	No power for engine	Check connect well or not
	Stop working no water	To make sure the water enough
Engine stop working	Impeller jammed	Clean the jamming articles or replace new one
	Out of control by key turn on/off	Replace new key
Radio stop working	Close or faulty of Circuit Diagram	Re-turn on or check the speaker
	Wave or VOL close	Turn on the wave or adjusting volume
Engine working but no massage function	No receiving wave band or weakly wave	search the wave band again
	No power supply	Check the plug and make it stable
Water leaking	Impeller damage or there is air inside the engine	Replace impeller or eliminate the inside air
	Some connection loosen or without seal can	Check and make connection tight and sealing
Little water fall	Cartridge of changeover switch damage	Change new cartridge
	Changeover switch is not on the certem position or the water weakly pressure	Change new changeover switch or increase pressure
	Water pipe was jammed	Remove the jams inside the pipe

5.Check and clear up

After the above steps, please check every connection sealed, clear up the inner of tub by water. Do not let any floater articles to go into circulation system or the pipe and Jet and engine will be jammed
